The Challenge:
Arthrex continues to experience unprecedented growth and demand for their products throughout the world. The prior demand planning process for the international business used a manual, spreadsheet-based approach.

The Solution:
QueBIT implemented Galileo which leverages highly accurate demand forecasts generated by predictive models within an intuitive, interactive budgeting and planning interface.

The Benefit:
Automation reduced manual efforts saving 30+ hours per week while gaining 10% improvement in forecast accuracy.

Arthrex, a global medical device company and leader in new product development and medical education in orthopedics. With a corporate mission of Helping Surgeons Treat Their Patients Better™, Arthrex has pioneered the field of arthroscopy and develops more than 1,000 innovative products and procedures each year.
We had reached the limits of our manual planning processes. Planners were spending more time gathering and cleansing data than they did actually forecasting. Galileo has greatly enhanced our forecasting abilities.

-Al Ivaska, Sr. International Demand Planner
Delivering the Solution

Arthrex engaged QueBIT to implement Galileo, a predictive demand planning solution that leverages proprietary predictive models within an intuitive, interactive, planning and reporting interface.

Using the power of predictive modeling, Galileo enhanced the process at Arthrex by automating the forecasts. This allowed forecasts to be generated at a more granular level, which identified more opportunities for revenue growth.

Galileo starts by calculating actual product trends at the lowest level, which is the pattern of increasing/decreasing demand over time. Demand drivers (predictors) can be extracted via data mining and used as inputs to improve trend predictions by applying appropriate weighting at the lowest level. Based on the actual trend, Galileo predicts future trends to determine how much upward (or downward) movement in demand. Galileo then applies seasonality and relevant drivers to generate a system forecast. The system automatically selects the best model to use for each combination based on which is most accurate.

Galileo leverages available data to forecast demand and develop revenue projections. Forecasts are generated monthly by material and country. Separate methods are used to forecast low velocity demand, new materials, and linked or replacement items. The forecasts are scheduled to run monthly, with the ability to rerun models on demand. Users can override the system forecasts and track changes in a separate version. Reason codes and comments can be entered with the forecast overrides to ensure transparency in the planning process.

Once the adjustments are complete, the forecast is submitted/saved, and copied into an approved version. Once approved, the weekly forecast is automatically uploaded into SAP.

“The system delivers reliable baseline forecasting for all our global markets. This enables our planners to focus on exception planning and applying local market intelligence to the plan. The integration of financials in local currency into the forecast process has greatly enhanced our S&OP efforts around the world. Our planners can seamlessly work with Finance, Sales, and Logistics within the Galileo system.”

-Al Ivaska, Sr. International Demand Planner

Products Used

- Galileo (Euclid Studio & IBM Planning Analytics)
Benefits/Results

- 10% improvement in forecast accuracy
- Ability to provide an operational revenue forecast to their external Distributors and Finance teams
- Automation reduced manual efforts saving 30+ hours per week

About QueBIT

Trusted experts in analytics, QueBIT is dedicated to helping organizations leverage their data to make more intelligent decisions, that result in significantly improved business value. QueBIT has delivered analytics solutions for more than 450 organizations, including some of the largest and most successful companies in the world. QueBIT solutions span the entire spectrum of analytics, from data management, including Big Data strategy and implementation, Business Intelligence, Business Planning, Predictive Analytics and IoT Analytics. QueBIT’s unique CARE methodology coaches customers to achieve independence in solution ownership, while delivering rapid time to value. QueBIT has been recognized by many industry awards. www.quebit.com
