ANALYZE. PLAN. ACHIEVE.

## Anaplan Health Assessment

**Ensure your Anaplan solution continues to serve your business needs as you grow and evolve!**

The promise of Anaplan is to ensure your entire business is connected on a single planning platform. The flexibility and ease of use makes it possible to model all aspects of your business, including finance, operations, and workforce. Flexibility is a pre-requisite for any powerful planning system because planning – by its nature – is always subject to change, due to external factors (such as the business climate) and internal factors (such as acquisitions and changes in strategic priorities).

With Anaplan, you have the power to easily alter your planning models and increase their scale. Over time, an accumulation of incremental alterations can result in a slow deterioration of performance. This is natural - your Anaplan system was originally configured to perform optimally under the prevailing conditions at a particular moment in time.

**If those conditions have changed, it may be time to Contact QueBIT for a check-up!**

**QueBIT's 3-Day Health Assessment delivers**

**1 DEPLOY**

QueBIT's Anaplan Healthcheck model in one instance of your environment

**2 REPORT**

Study output of the healthcheck model and identify the highest value items.

**3 PRESENT**

Recommendations report is packaged and presented

**QueBIT will help you tune the size, complexity, and effectiveness of your model. This will maximize the speed, minimize the cost, and ease administration.**

- **Optimize effectiveness** - QueBIT will ensure your model does exactly what you need.
- **Minimize the impact of turnover** - QueBIT will build a system that ensures continuity across personnel changes.
- **Data Integration** - leveraging the efficiencies of data automation.
- **Future-proof solution** - expanding the use of Anaplan Connected Planning.
- **Best practice approach** - leveraging the application of how others are using Anaplan.

QueBIT®  
Analyze. Plan. Achieve.

# The QueBIT Difference Is AUTOMATION

QueBIT's Experts have created an Anaplan model-checking tool that automates the assessment and validation phases of the process, so that you can get actionable performance-improving recommendations in a fraction of the time (and cost!) of a manual health assessment.

This tool, which is itself implemented as an Anaplan model, checks each of your models for compliance with Anaplan's own standard for optimized model development known as [PLANS](#).

The Automated tool speeds up the diagnostic step of the process: QueBIT's certified Anaplan experts interpret the output of the automated tool for you, to compile a report that lists model improvement recommendations in order of priority.

## In defining the standard, everything we do will consider or be based around:

- **Performance** – Use the correct structures and formulas to optimize the Hyperblock
- **Logical** – Build the models and formulas more logically
- **Auditable** – Break up the formulas for better understanding, performance, and maintainability
- **Necessary** – Don't duplicate expressions. Store and calculate data and attributes once and reference them many times. Don't have calculations on more dimensions than needed
- **Sustainable** – Build with the future in mind, thinking about process cycles and updates

**P** - PERFORMANCE  
**L** - LOGICAL  
**A** - AUDITABLE  
**N** - NECESSARY  
**S** - SUSTAINABLE

QueBIT's Health Assessment model is dynamic, allowing multiple models from a client to be ingested, protected, and summarized in one location. Once the model is utilized, it creates a clear path for future support and enhances our consultants' abilities to break down complex formulas, helping to deliver quick wins with big results!

## Client success is at the heart of our mission.
